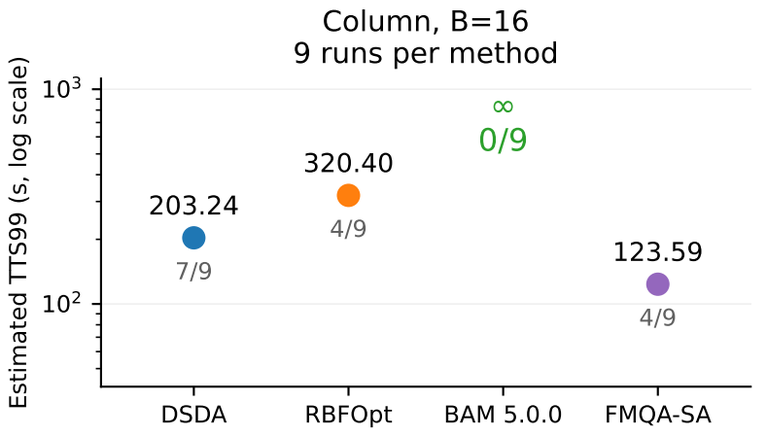
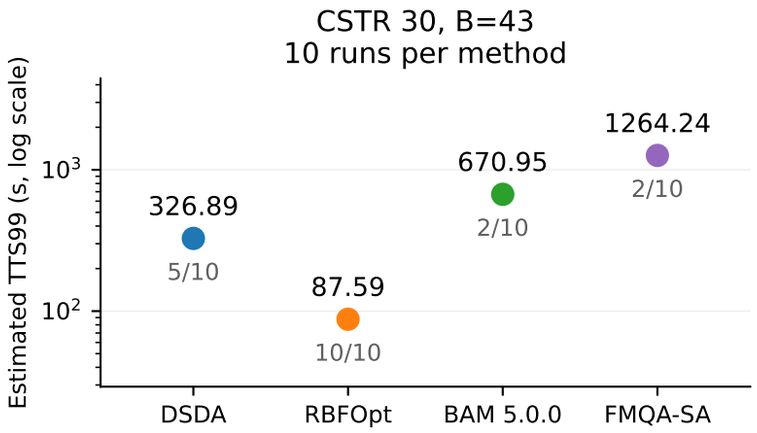
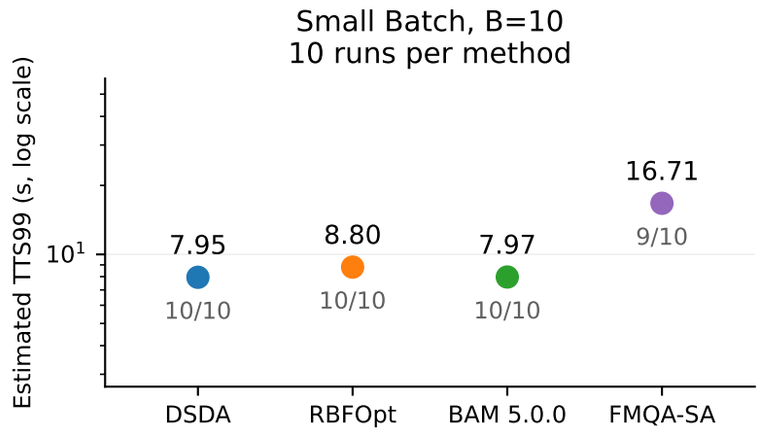
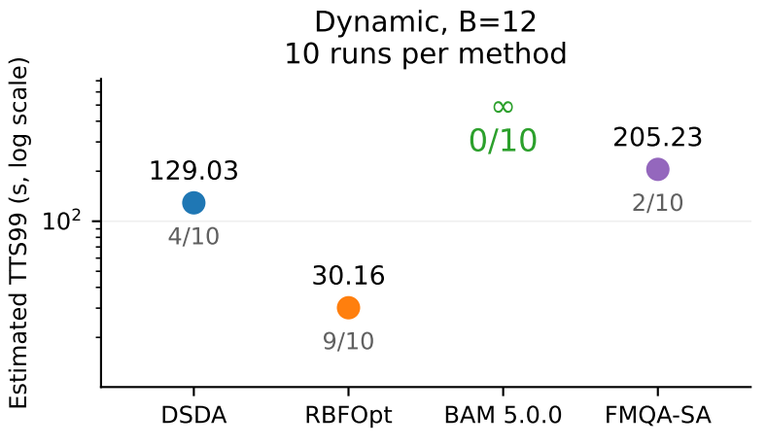
NLP-inclusive TTS99 estimates

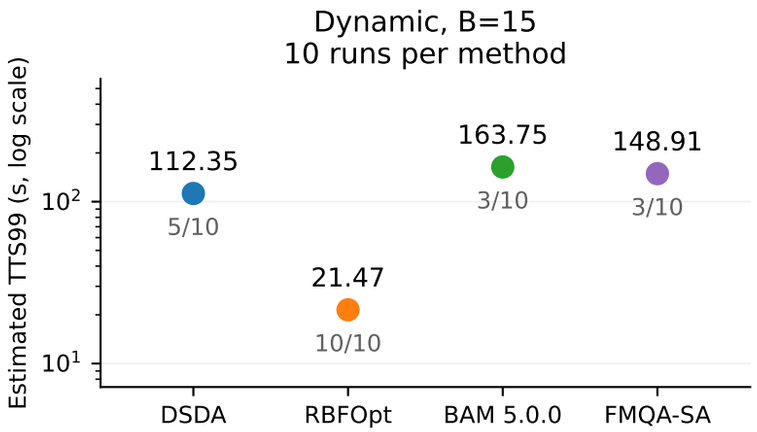
DSDA · RBFOpt · BAM 5.0.0 · FMQA-SA

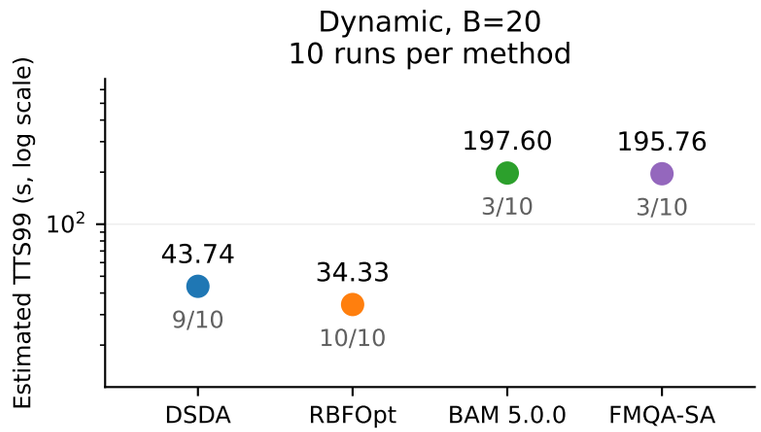


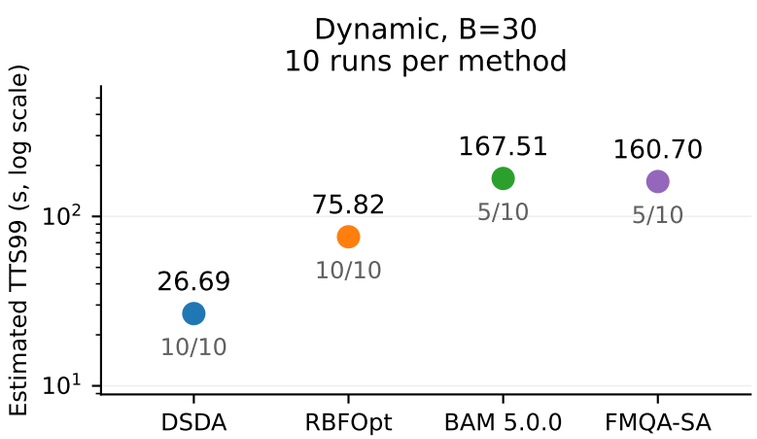


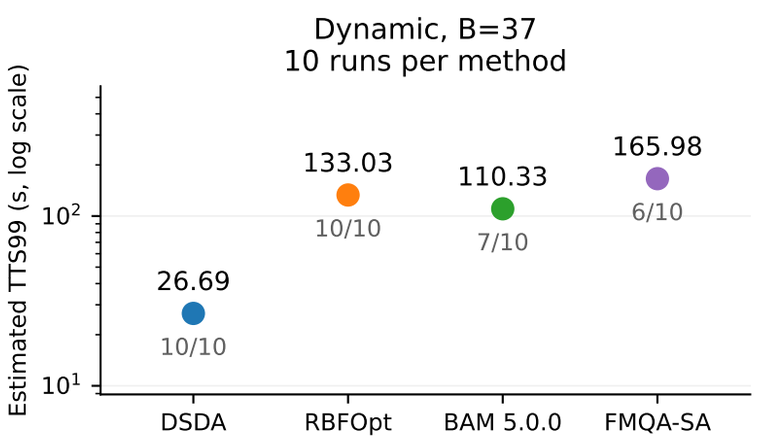


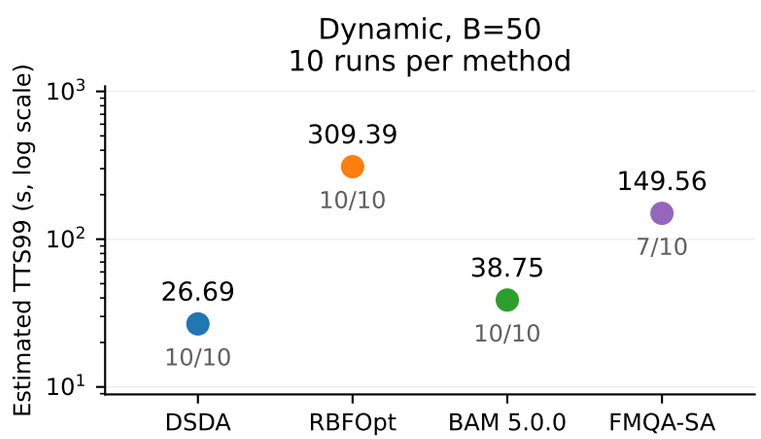












TTS99 = median completion time × ceil[log(0.01) / log(1 − hit rate)]. p=1: one run; p=0: ∞. Labels: hits/runs.

Fixed-path completion estimates, not first-hit or measured online NLP times. TTS99 assumes independent restarts with the observed hit rate.
